

Remote Monitoring

Supplied as standard across our entire fleet

MONITORS

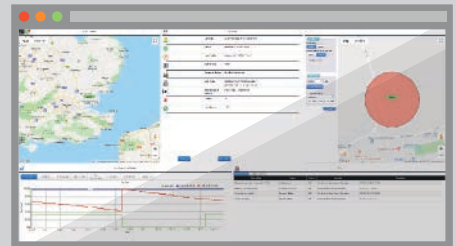

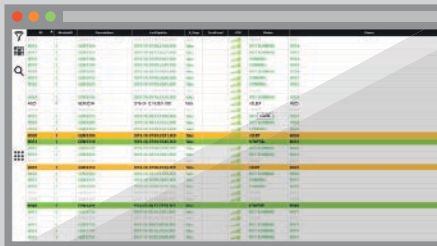

FUEL LEVELS
OPERATING PARAMETERS
SYSTEM STATUS

The MEMS 24/7 control room remotely monitors and protects our entire fleet continuously monitoring all the key operating parameters including fuel levels, consumption and efficiency.

LIVE DATA

ON ENTIRE FLEET
IN REAL TIME

With a proactive approach to equipment monitoring, the prevention of potential issues before they occur provides our customers with a support network during their rental period, 24 hours a day, 7 days a week.

Designed, implemented and installed by MEMS engineers, this dynamic bespoke system enables MEMS to provide an unrivalled level of service with round the clock monitoring by our own inhouse 24/7 control room.

MEMS CONNECT, Right there with you

MEMS Connect has been developed internally over many years to provide our control room with the very latest telemetry solution, built specifically upon the needs of our customers and to suit our unique equipment rental approach.

With Connect, we are continuously connected to real-time information of every MEMS asset with a wide variety of performance characteristics being monitored by experienced operators and engineers around the clock.

GENERATOR SOLUTIONS

You can rely on

MEMS operate one of the most extensive generator rental fleets in the UK with generators ranging from 30kVA trailer-mounted units up to single power nodes of 2000kVA. Our extensive fleet, coupled with large stocks of cable and distribution ensures equipment availability when you need it. Whether your requirement is a short term fix due to flood or fire damage or a strategic longer-term solution, MEMS can offer a flexible and tailored solution to your needs.
